## Features

- ROHS Compliant
- Packaged in 12mm tape on 7" diameter reels
- EIA STD package
- Compatible with automatic placement equipment and infrared reflow solder process
- Preconditioning: accelerate to JEDEC level 3
- RGB and driver chip are integrated in a package, to form a complete control of pixel point with constant current.
- One pixel contains R, G, and B color that each can achieve 256 level brightness grayscale, which forms 16,777,216 combination colors. Internal clock frequency is operated at 800 kHz.
- Serial data transmission signal by only single wire.

## Applications

- Telecommunication, office automation, home appliances, industrial equipment
- Status indicator
- Signal and symbol luminary
- Front panel backlighting
- Full-color strip.
- Indoor decorative lighting / curtain display

Notes:

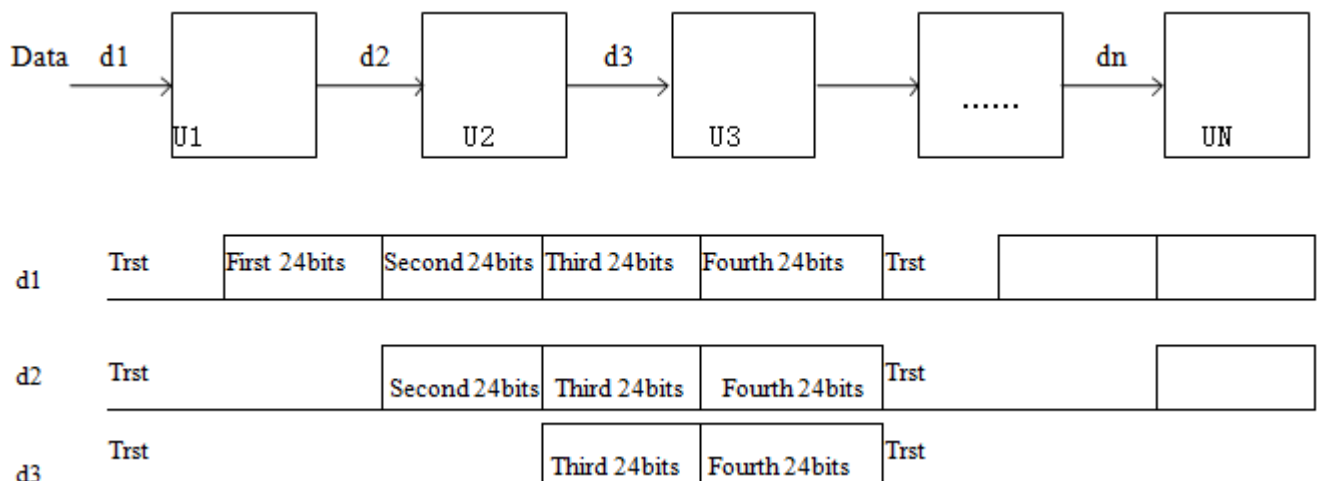

- Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
- $\theta_{1/2}$  is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- The dominant wavelength,  $\lambda_d$  is derived from CIE chromaticity diagram and represents the single wavelength which defines the color of the device. Peak Emission Wavelength Tolerance is  $\pm1nm$ .

## **4. Data transmission method**

## ■ Dimensions

---

### Recommend pad layout

- § All dimensions are in millimeters.
- § Tolerance is  $\pm 0.1\text{mm}$  unless other specified
- § Specifications are subject to change without notice

## ■ PIN Configuration

---

No.	Symbol	Function description
1	DIN	Control data signal input
2	VDD	Power supply LED
3	DOUT	Control data signal output
4	GND	Ground

## ■ Reflow Profile

### 1. I<sub>R</sub> reflow soldering Profile for Lead Free solder

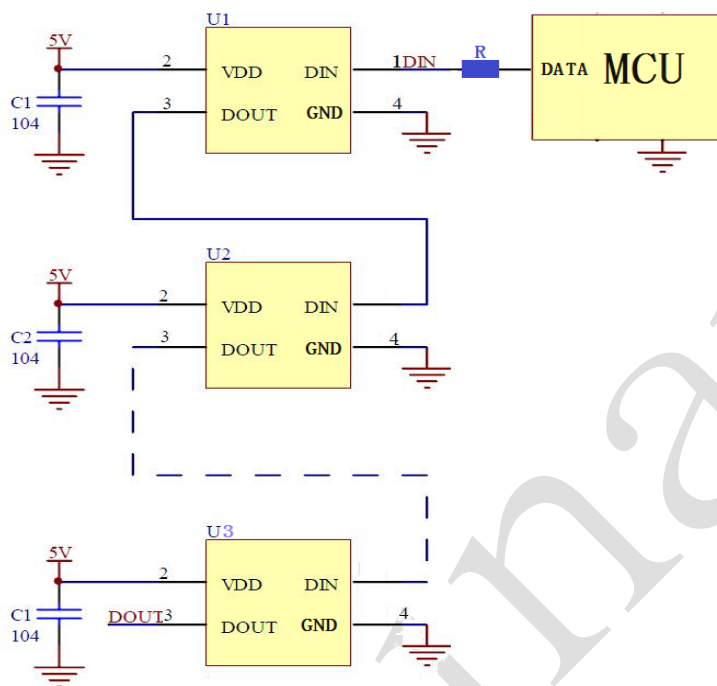

#### Notes:

1. We recommend the reflow temperature 240°C ( $\pm 5^\circ\text{C}$ ). the maximum soldering temperature should be limited to 260°C.
2. Don't cause stress to the silicone resin while it is exposed to high temperature.
3. Number of reflow process shall not be more than 1 time.

## ■ Test Circuit and Handling Precautions

### 1. Typical application circuit

### 2. Handling precautions

#### 2.1. Over-current-proof

Customer must apply resistors for protection; otherwise slight voltage shift will cause big current change (Burn out will happen).

#### 2.2. Storage

1). It is recommended to store the products in the following conditions:

Humidity: 60% R.H. Max.

Temperature: 5°C~30°C (41°F~86°F)

2). Shelf life in sealed bag: 12 months at <5°C~30°C and <60% R.H. after the package is Opened, the products should be used within 72 hours or they should be keeping to stored at ≤20%R.H. with zip-lock sealed.

#### 2.3. Baking

Suggest packing opened after 72 hours, before use baking products, conditions as follows:

1). 60±3°C X 6hrs and <5%RH, for reel

2). 125±3°C X 2hrs, for single LED

It shall be normal to see slight color fading of carrier (light yellow) after baking in process

### ■ Packing

#### ● Dimensions of Reel (Unit: mm)

Note: 01.The tolerance unless mentioned is  $\pm0.2\text{mm}$ .  
02.The measured unit is "mm".

#### ● Dimensions of Tape (Unit: mm)

#### ● Arrangement of Tape

#### Notes:

1. Empty component pockets sealed with top cover tape
2. The max number of consecutive missing SMD is 2pcs;
3. The cathode is put towards the tape sprocket hole in accordance with ANSI/EIA RS-481 specifications;
4. 1,300 pcs per reel;
5. The remainders will be packed in a multiplication of 500pcs.

## ■ Packing

---

### ● Packaging Specifications

#### Notes:

Reeled product (max.1,300) is packed in a sealed moisture-proof bag. Five bags are packed in an inner box (size: about 260 X 230 X 100 mm) and four inner boxes are in an outer box (size: about 480 X 275 X 215 mm). On the label of moisture-proof bag, there should be the information of Part No., Lot No. and quantity number; also the total quantity number should be on inspection request form on outer box.

## ■ Precautions

---

### 1. Abnormal situation caused by improper setting of collet

To choose the right collet is the key issue in improving the product's quality. LED is different from other electronic components, which is not only about electrical output but also for optical output. This characteristic made LED more fragile in the process of SMT. If the collet's lowering down height is not well set, it will bring damage to the gold wire at the time of collet's picking up and loading which will cause the LED fail to light up, light up now and then or other quality problems

### 2. How to choose the collet

During SMT, please choose the collet that has larger outer diameter than the lighting area of lens, in case that improper position of collet will damage the gold wire inside the LED. Different collets fit for different products, please refer to the following pictures cross out

**Outer diameter of collet should be larger than the lighting area**

Picture 1(✓)

Picture 2(X)

### 3. Other points for attention

- A. No pressure should be exerted to the epoxy shell of the SMD under high temperature.
- B. Do not scratch or wipe the lens since the lens and gold wire inside are rather fragile and cross out easy to break.
- C. LED should be used as soon as possible when being taken out of the original package, and should be stored in anti-moisture and anti-ESD package.

### 4. This usage and handling instruction is only for your reference.
