

Vehicle Gateway Solutions

Vehicle manufacturers are facing new challenges as they build next-generation, intelligent and autonomous vehicles. They require adaptive connectivity solutions with seamless end-to-end network integration for a myriad of hardware, software and services.

Molex Connected Mobility Solutions vehicle gateway delivers a 10 Gbps data rate and signal integrity performance while integrating mission-critical features, such as network traffic prioritization, system scalability and security.

Molex's new vehicle networking platform provides advanced virtualization, edge compute, network performance, flexibility, failover features and built-in security. Molex vehicle gateways connect legacy ECU devices to the in-vehicle Ethernet network, facilitate various Ethernet protocol communications throughout the chassis, and to the cloud. This uniquely scalable in-vehicle network solution can be rightsized to enable autonomous vehicle connectivity and address computer and bandwidth goals.
